COPYRIGHT: (C)1997,JPO

(57) Abstract:

**PROBLEM TO BE SOLVED:** To provide a call reception state controller in which a call reception state is limited surely in the case that inconvenience takes place like an attending state of a conference and the limit of the call reception state is surely released in the case that no convenience takes place.

**SOLUTION:** A transmitter is installed to a location (conference room or the like) whose call reception is desired to be limited. The transmitter sends a limit signal for limiting call reception only for a prescribed time in a radio wave. The portable communication equipment measures the strength of a signal from the transmitter (S21), and when the strength is a prescribed level or over (S23), the call reception limit is automatically set even when the call reception limit is not set by an operation section (S27) and when the strength is not the prescribed level or over, (such as going out of a conference room or such that transmission of a limit signal is stopped), the call reception limit is automatically released (S31).
